WHY USE THE LIBRARY?

The Deep / Invisible Web:

- Internet Search Engines, like Google, can only search the “visible web”.
- The deep, or invisible web, includes content that isn’t indexed and which Google can’t access, such as password-protected sites, database results, academic journal articles, sites behind paywalls, and internal (intranet) sites, to name a few.
- The library can give you access to a lot of these “deep web” sites. We subscribe to hundreds of databases and pay for research and reports that you can freely access.
